Create a TODO flutter project

- where task can be shared and received with another user
- when task is shared with other users, and they are making some changes that should reflect to the owner of the task in real time
- task can be shared via email and other media
- List can be infinite
- use component for ui widget (List view, input field and others)

Note

1. Project should be in mvvm structure
2. Use Riverpod for state management
3. App should be responsive (work on all different screen sizes)

Please send me a result in Github repo link.
